PROGRAM IN

Survey Methodology

The Michigan Program in Survey Methodology (MPSM) is a program where students learn the science of surveys. Students in the program receive theoretical grounding in all aspects of survey methodology, from sample design and measurement, to modes of data collection, statistical estimation, questionnaire design and probability sampling methods. Students have the opportunity to explore novel ways to develop applications of survey methodology in a wide variety of fields.

Panel: Rise of the Machines: An Intro to Machine Learning Methods with Applications in Survey Research

Big data and machine learning are both quickly becoming 'big' buzz words. As data sources continue to provide greater access to person-level data in larger volumes and at greater speeds, survey researchers find themselves wondering about what the future role of traditional surveys will be in this new era of information. But with the increase in the types of information that is available prior to survey data collection as well as with continued advances in the types and quality of paradata that are collected during the survey process, survey researchers now have an unprecedented opportunity to improve the adaptive survey process. As the volume of data increases more quantitative researchers are beginning to rely on machine learning methods to gather insights. In this panel we will discuss four common machine learning methods that can be applied to administrative, frame and other survey paradata to provide insights into both survey design and analysis including random forests, Bayesian additive regression trees, sequential learning methods like recurrent neural networks and LASSO-based techniques for variable selection. Presenters will offer an introductory overview of the machine learning method intended for general audiences and then provide an in depth example of the method applied to survey methodology. Examples to be presented include applications of these methods to survey sample designs, estimation of response propensities, predicting survey outcomes based on observed behaviors during the response process, and estimating population means and proportions from nonprobability samples. This session is intended to provide the attendee with both a general overview of common machine learning methods and very specific examples of how the method can be integrated into the survey research process.

The ELM, Media, and Public Opinion: What Do (and Should) We Know After 30 Years?

The Elaboration Likelihood Model – the venerable dual-process model of persuasion, with its classic focus on central, peripheral, and other mediating mechanisms, rife with implications for the psychology of public opinion – turns 30 this year, prompting consideration of its contributions and changing contours in an age of social media-based political persuasion. Thirty years ago, in 1986 Petty and Cacioppo published their seminal theoretical chapter in Berkowitz's *Advances in Experimental Social Psychology* volume, a testament to the model's conceptual promise.

The ELM, with other dual-processing approaches, has broad implications for public opinion, both reasoned consideration of policy issues, but also use of prejudicial heuristics, issues that take on resonance in the white-hot presidential campaign. An outstanding cross-disciplinary panel -- communication scholars, psychologists, and political scientists -- examine these questions, drawing on their well-respected work, offering a theoretical foundation consonant with MAPOR's academic traditions, with special relevance for this year's technology in a time of change conference theme. With the 30-year vantage point in mind, panelists will assess ELM's strengths and shortcomings, discuss how persuasive cues function in a social media age, and reflect on closed-minded processing, as well as how heuristics and group identifications influence public opinion.

Quality does not come automatically. It takes years of experience, a fusion of know-how and talent to build trust. A knack for understanding customer needs, and the attention to detail that really make a difference.

At Marketing Systems Group, we treat each of our customers uniquely. It's how we do business. It's how we became an industry leader. It's why your next market research project should include us.

Because Quality Matters.
